Auto width not working on sub menu level 1 only

Posted by blibecap - 2015/02/14 21:58

_____

I have the menu installed and like the auto width but it is not working correctly on sub-menu level 1. The title Viewfinder Adapter breaks up on two lines. But yet the title How the Housing Sentry-Complete Works on the third level doesn't break.

here is my custom code:

.ux-menu-sub {z-index: 20001;}
UL.ux-menu>LI A
{border-style: none !important;}

#{$id} LI.ux-menu-item-level-1
{width: 230px;}

The last bit of code was added to keep this from breaking.

The web site is http://uwcamerastuff.com/new/

Thanks

_____

Hello,

The page doesn't contain "ARI Ext Menu" module.

Regards,
ARI Soft

_____

I have rebuilt the web site and re-installed the menu and set up some test menu items. The algorithm that is used to determine the column with can bee see with the sample data. i did reinstate the the 230px item and it seems to be working ok now.

Thanks

Bill

_____

Have you had a problem with menu yet? If yes, could you described how to reproduce the problem?

_____

I quit having that problem because I set the width. However if I unset the width then the second menu items wrap. Look under current products and about us.

I do have a little concern and info maybe. If you look at the site I have two menu's. The lower menu overlays the top menu when you drop down current products.

Also there is a strange action with examples. It doesn't highlight on mouse-over and business theme doesn't highlight on mouse-over. If you change to a different theme business theme will highlight on mouse-over.

Thanks

Bill

_____

Decrease value of "Z-index" parameter for the second menu in module settings.

_____

There was no z index so I set the top one at 10 and the lower one at 5 and that fixed that problem.

Thanks

Bill
