
Multiple Ari Ext Menues

Posted by DrJones - 2015/03/06 18:24

Hey there!

i am trying to use 2 ari ext menues on my joomla 3.3 site.
i duplicated/copied the module and i got 2 menues :) so far so good.
the problem is now, that i dont know where to find the css file of the new one!?
there is still only one "mod_ariextmenu" folder in the modules folder...
but the new menue has to look different...

Anybody got an idea?

greetings

=====

Hello,

All module instances are used the same CSS file. Some settings (like background color, text color and etc.) can be set in module settings. This post also should be useful if want to customise the menu.

Regards,
ARI Soft
