
Menu item image in Ari Menu

Posted by Mazfer - 2015/03/18 17:12

Hello,

Is there a way to make the Ari Ext Menu grab a menu item image?

I played around with it a bit, but couldn't get it to work. I did find that it is possible to do a workaround by adding a background image to the li -item in CSS. Sadly that is not always an option if you develop a site for a client, as you have to add/change the specific menu item CSS each time a new menu item is added or an image is changed.

Thanks in advance.

Hello,

If you want to use menu items from menu items settings, it requires modification of the extension.

Regards,
ARI Soft

I tried doing that but didn't get anywhere. No worries though, I didn't go with my original plan anyway :)
