## Drop-Down with Flash Video Below It Transparent

Posted by craad - 2010/07/12 00:48

---

I got my drop-down menu to function fine for the major browsers I checked (Safari/Firefox - Mac, IE/Safari - PC) except for Firefox - PC. Right below my navigation is a flash video. I am using the latest version of all these browsers including the latest version of flash. My video requires flash 8 to play. I had added

wmode="transparent"

to the flash object tag which resolved the issue of the drop-down menu appearing behind the flash video in IE on the PC. Now, in Firefox for the PC, the drop-down menu appears over the flash video but when I mouse over a sub-category that portion of the drop-down menu becomes transparent (or disappears). I am not sure why. Could someone please shed some light on this?

My website is here.

Thank you and I look forward to your response.

Hello,

HTML code for Flash object is incorrect. Correct code should look like:

I recently updated firefox on my mac as well as flash to the latest version. Now the drop-down menu appears to be glitchy and unstable. Do you have any advice as to how I can fix this?

Sorry, but we can't check it on Mac OS. It seems this software specific issue.
