Multiple Active Parents

Posted by Square2Marketing - 2015/07/13 13:19

I have a menu system where one top menu item is arranged by products and another by Applications. Some site pages appear in the menu twice, once in the Products, and once in the Applications. The entry in Applications is a Joomla menu alias pointing to the menu item in Products.

The problem is that when I visit that page it highlights both of the parents. Is there any way around that? I only want it to highlight the main entry.

Test page: http://mortarnet.square2marketingdev.com/joomla3/products/weepvent.

Thanks for your help.

Hello,

It is not possible to distinguish items with the same alias when SEF is used. You can see that they have the same links.

Regards,
ARI Soft
