
Submenu problem

Posted by tompasworld - 2015/07/31 06:51

Hi,

First of all, thanks for a great module. Been using it for years without a problem until now.

Until a few weeks ago, this menu was working fine, but not now.

On the attached screen shot, the top level menu item "About us" has been clicked, and as you can see the, the sub menu tries to open, but for some reason the whole sub menu are does not get open.

What can be the problem?

Thanks in advance,

Tompa <http://www.ari-soft.com/images/fbfiles/images/extmenuprob.jpg>

Hello,

It seems this is a problem with site template styles. Send a link to a page where the problem occurs so we can investigate it.

Hi & thanks,

The site isn't live yet, so can I send this via pm or email?

Also, I should add that this problem occurs only when visiting the site with either an ipad/tablet and by mobile.

I don't see that it can be a responsive problem since the site once upon a time did work in ipd/tablet/mobile.

Add the following CSS rule to "CSS Styles" parameter in module settings:

.navigation .nav-collapse.in.collapse {overflow:visible;}

Thanks.

It works great now. :)

Atleast in landscape mode on a mobile. Lets hope potential customers turn their phones.
