
Sub Menu/Children Items not showing

Posted by triantigua - 2010/07/19 23:08

I have downloaded and successfully installed menu on my test site however I am having the following issues

1. submenu items not showing....i've attempted to make the changes suggested in your forum and have been unsuccessful.

Please advise.....I am not able to give access to my testsite as it is running on local host.

I can give temporary access to my live site....please advise so that I can set up access or I can temporarily upload the menu to live site for your viewing.

I am currently using ARI YUI but love the ARI EXT MENU

Thanks
Juanna

Hello,

Install the menu on online site and provide link to page where we can see this issue. Probably it's a conflict with site template styles.

Regards,
ARI Soft

Menu is online....please let me know if you need backend access.

Thanks

Add the following CSS rule:

```
.main #topmenu
{
    overflow: visible;
}
```

can you please tell me where I am adding this css rule my template has the following css

constant.css
template.css
template_css.css

or am i adding this to the modules css.

Thanks for your quick response ;-)
