
Centering vertical menu

Posted by madelharri - 2015/08/24 12:52

I'm trying to get a vertical menu to be centred in a sidebar on my site. I'm using RocketTheme's Ethereal template which is built using Gantry 5 and have tried various ways of altering the CSS but without success.

I managed to get it to central on a desktop by playing with the font size, but when it reduces for mobile it is out of sync.

You can see the site at <http://yokosphotoworld.com/development/stonecircle/>

Thanks

Hello,

Add the following CSS rules:

```
#verticalmenu .g-content {padding:0;margin:0;}
```

```
#verticalmenu .ux-menu-container {display:inline-block;}
```

Regards,

ARI Soft
