change submenu box position

Posted by madelharri - 2015/09/07 13:33

_____

I've changed the borders to just show between items by removing all except the bottom border on everything but the last item. However I need to find a way to either to move the box containing the submenu 10px to the right so that they don't overlap the side bar or remove the submenu borders so that I can add a border to part of the transparent gif.
The site is http://development.mcmullinmarketing.com/ so you can see what I mean. Thanks

_____

Hello,

Try to add the following CSS rule:

UL.ux-menu A {padding-left: 5px !important;padding-right: 5px !important;}

Regards,
ARI Soft

Hi Admin,

I tried your code but the arrow's position would be too left as picture shown. Any way to fix this??

_____

The sub-menu arrow is in an absolute position in the a-element, meaning it's free to move around within said element.

When you add a padding to A you actually add an inner margin to it.

What you can do is to only increase the padding-right of A so the arrow is pushed to the right.
