## scrollbar for submenu

Posted by annienma - 2015/09/25 08:53

---

Hi (me again! :laugh: ),

I want to make the submenu has auto scrollbar as I have lot of menu items. It did work for first level submenu as shown in picture. But level 3 submenu doesn't appear! Please help!!

I used below code

```
ul.ux-menu a {  
padding-left: 10px !important;  
padding-right: 5px !important;  
}
```

```
ul.ux-menu-sub {  
z-index: 30000;  
min-height:150px;  
max-height:390px;  
overflow-x:hidden;  
overflow-y:auto;  
}
```

Hi again.

Try removing "overflow-x: hidden;"

The code basically says to hide everything overflowing in the x-axis. This hides the sub-sub-menus because they flow out to the right (in the x-axis).

Hi,

I checked what's the reason of the 2nd submenu disappearance when I removed the "overflow-x:hidden;" code. It turns out that the submenu is inside or bound with the first submenu. :S

Hi again..

it's the overflow code (both overflow-x and overflow-y) that hides the sub items.

Hi,

So I can't use overflow code? Any other code that can make it scroll? :S

Maybe the admin knows?

Unfortunately I cant think of any code that would make it work without having to rewrite the html structure of the menu.

Currently the menu structure goes like `ul > li > ul > li` etc..

This means if you overflow something on one `ul` it hiddes the `ul-submenu` items.

Here's what happens when using overflow on `.ux-menu-sub`.

The `ul.ux-menu-sub` is absolute positioned to a relative positioned `li.ux-menu-item-parent`.  
Because the `li-item` is positioned relative it acts like a container to the absolute positioned `ul.ux-menu-sub`.

The absolute positioned `ul.ux-menu-sub` is moved from the left border to the right with code that calculates the width of its parent item, being `li.ux-menu-item-parent`, + 1px. If this wasn't happening the `ul.ux-menu-sub` would be positioned under the `li.ux-menu-item-parent`. The code mentioned above is the reason to why the `ul.ux-menu-sub`, appears to the right of its parent item being `li.ux-menu-item-parent`.

So basically the whole menu is originally structured as a list, with each item below each other. So that is why the "overflow-y: auto;" hides the sub-menu levels but the first level.

edit: clarity
