
Menu Not Responding in Firefox

Posted by jimbrooking - 2016/02/11 21:37

On Firefox 44.0.2, which just loaded this afternoon, the AreExtMenu on my site (pinned to the top of the screen at <http://www.fearringtonfha.org>) is completely unresponsive. Rollovers don't cause drop-downs and links don't open new pages.

The menus work perfectly in Chrome, MSIE and Edge. Any ideas why it's broken in Firefox?

Thanks.

In your custom.css file:

add float: left; to

```
div#ariext173_container, div#ariext64_container {...}
```

alternatively change "display: inline !important;" to "display: block !important;" in the container code mentioned above.

Seemed to be a z-index issue, I think.

Hello,

I am running across this problem in that the dropdown menu does not show. The problem is with Firefox and Edge on windows. There is no problem with Chrome, Firefox or Safari on mac. Please advise if i should use the same measures to fix the problem that have been suggested. Our website is www.nalac.org
