Menu doesnt display in \"menu\" position Posted by gingerweb - 2016/04/16 14:34
Hi. he menu works fine in every position except the "menu" position - any ideas why?
have copied it temporarirly to the position just below it so i can set it up but i need it to go to the menu position really.
t can be seen here: http://bluefrogtoys.temp-gingerweb.com/ and you can see the space caused by the menu but it doesnt show above the one that works. am using Joomla 3.5.1 on a Yoo theme template called Peak
cheers for any help.
Re:Menu doesnt display in \"menu\" position Posted by admin - 2016/04/17 07:14 Hello,
The page doesn't contain "ARI Ext Menu" so we can't investigate the problem.
Regards, ARI Soft
Re:Menu doesnt display in \"menu\" position
Yep thanks for looking, i gave up in the end as it looks like there are some mobile restrictions on the module too, thanks anyway though its a great module for free!
