ARI Ext Menu on Android mobile devices

Posted by burov1971 - 2016/04/24 20:35

Hi all! I'm install subj. on my site eco-bio.spb.ru. It work nice on any desktop browsers, BUT! On mobile devices it show menu button only. If press it nothing happened, address change to #mainmenu_inside, but main menu not show. I try to read forum, but with my English it's special difficult task, i never find in it and in Web too. Anybody help, please!

Hello,

The module doesn't show "menu" icon, the icon is shown by site template for the selected module position width of browser's window less than 980 pixels and it doesn't support "ARI Ext Menu". It requires to modify site template to remove this icon.

Regards,
ARI Soft
