sub menu alignment and other issues

Posted by zionshea - 2016/08/08 12:47

_____

Hello ARI,

First, one comment: I found out that if a numeric character (in my case it was: 4) appears in one of the sub-menu item names, then all sub-menu items appears very very wide - this is only in Microsoft IE - in Chrome and Firefox this is OK.

I have few questions hope you will be able to help:
1. Can I move the arrow in main and sub menus from right to left?
2. Is it possible to position the sub menus to the left instead the right of the main menu or sub-menu item?
3. Can this menu be used in mobiles and narrow screens and display a simple side menu?

Thanks,
zionshea

_____

Hello,

Sorry, but the extension doesn't support ability to show sub-menus at left side instead of right side.

Regards,
ARI Soft

_____

The extension doesn't support ability to collapse and expand menu items depends on size of browser window.

Regards,
ARI Soft
