# Responsive menu
Posted by nlpkh - 2016/08/29 22:16

---

Hi!
I've installed Ari Ext Menu in my joomla, theme it_zen.
With mainmenu ther is now trouble.
But I've choosed responsivebar and at smartphones\iphone - menu workes incorectly:
when I press menu in iphone - it dropdowns with submenus (shows catergorys), but IF i choose mene-category with submenus - module doesn't dropdown! Instead of this menu opens page with category.

How can I make menu responsive?

P.S: Link to website www. nlp-kh. com.ua

Please help!

Hello,

This is problem with an extension which creates a navigation bars on small screens. It copy of content instead of using existing one and as result menu javascript code is not used.

Regards,
ARI Soft

Is it default Joomla extension or what?
I dind't understant what to do to fix problem.
Please help

This is not "ARI Ext Menu" issue, this problem with the panel where menu is loaded on small screens. We don't know what extension do you use for this panel. Probably it is created by site template.

Regards,
ARI Soft
