
Menu showing ONLY if it has a submenu in IE7!??

Posted by vinny7000 - 2010/09/03 14:58

It works fine in Firefox and IE8 even with compatibility mode!

But it doesn't work in IE7

Hello,

Sorry, but we can't reproduce this issue.

Regards,
ARI Soft

Do you mean it's working fine on your computer? Or you can't test it on IE7?

I've tried to open your demo page on IE7 and it works fine.

A already tried to remove all other styles, javascripts and other content from my page, but still no luck!

http://www.ari-soft.com/images/fbfiles/images/menu_problem_2.jpg

Even this file

```
Ext.onReady(function() { new Ext.ux.Menu("ariextmenu_ariext228",
{"transitionType":"slide","transitionDuration":0.2,"animate":false,"zIndex":500});
Ext.get("ariextmenu_ariext228").select(".ux-menu-sub").removeClass("ux-menu-init-hidden"); });
```

Industries

Overview

Education

Financial Services

Healthcare

Healthcare Video

Healthcare Industries | Main

Manufacturing

Public Sector

Retail

Services

Telecommunications

The strange thing is that when i remove the first line from the page it's working!!

What can be the problem?

We tried to reproduce it in IE 7 emulation mode and in 'Multiple IE' and it works.
