Top space between link bar and body

Posted by alejandrowa - 2010/09/13 23:36

_____

Hi

Im redoing my website www.pixelestudios.com/cms and Im using this nice plugin ariextmenu. Ive used it before with no problem as a 100% div , but now have it on the top side like 480px and it shows me a bug.

You can see a red div and black div, the button should be aligned on the red div and they are middle in red and the other half on black.

Anyone who know or have an idea how to fix it?

Thanks

==

Hello,

This isn't menu problem. This problem with incorrect HTML code in your site template. Open index.php file of site template, find the next code:

and use the following code:

In other words this code contains incorrect closed tag.

Regards,
ARI Soft

Thanks ! sometimes I focus so much on other things that dont even take care of little details, when the solution can be quite easy!

Thanks again !
