
Dropdowns within Content not in menus

Posted by willd3rbeast - 2010/09/15 03:00

Is it possible to display the dropdown menus in content within joomla like on the homepage, I have had no luck finding any mod that will allow me to do this.

your demo page has exactly what I need:

<http://www.demo2.ari-soft.com/ari-ext-menu.html>

thanks.

Hello,

'Content - Load Module' core Joomla! plugin can be used for this purpose. You can read manual how to use it [here](#) or [here](#) or JEZ Module Loader can be used. If JEZ Module Loader plugin is used set 'Assets loading method' to 'Inline' in menu module settings.

Regards,
