Instructions

Posted by rja02002 - 2010/09/16 03:20

I installed the ari ext menu module, but I have no instructions on how to use it. I am using a template that already has a top menu, but it does not have functionality regarding drop down menus. I want to use this to do so, but there is literally no instructions to help. What should I do/what do I need to do to get the drop down menu for my website's "top menu" to work?

Hello,

The module works as standard Joomla! module. More instructions how to setup the module can be found in this post.

Regards,
ARI Soft
