
Problem with vertical space menu and IE

Posted by kevinl - 2010/09/25 12:02

hello,

I've just started to work with this module and works great but i have three problems.

1. How do I make the (vertical)space between 2 sub menu items smaller?
 2. How do I make the space between the menu and the header smaller?
 3. When I open the dropdown menu "algemene informatie" in "Internet Explorer" the menu automatically closes when you put the cursor between the gaps of two subitems. (this happens when you put the cursor between subitem 2-3 and 3-4)
- Problem 3 doesn't occur in chrome and firefox. Do you have a solution for this to?

Thank you!

Hello,

Add the next CSS rules:

```
.ux-menu-container LI
{
    padding: 0;
    margin: 0;
}

.ux-menu-container .ux-menu-sub A
{
    zoom:1;
}
```

Regards,
ARI Soft
