
Customizing colors

Posted by amanduhb52 - 2010/09/30 18:25

Hello!

Love the menu.

I would like to customize the colors a bit tho, and to have the menu stretch across the length of the site (no padding on the ends).

For the menu, I'd like to keep the border but would like to have the ability to change the color. I would also like to have the inside of the menu white. Same for the submenus.

Also, I notice that with submenus, if the title of the submenu is too long, the color breaks up as though is is showing another submenu. Is there a way to turn off that effect? Maybe getting rid of a height parameter or something.

I guess I am looking for a mini-template that allows me to customize all colors and borders of the menu and to have it fit the length of the site.

Thanks!

Amanda
