## Regarding Freetext Question Type

Posted by hetul - 2011/03/12 05:48

---

I am using the Lite version of the quiz. I am using Freetext to have guest user fill in their name.

I would like to show this name in the results page. Also, I have configured the quiz to send the results to a specific email id... so I need to have this name appear there too!

Can you please advice how this could be done?

Also, in general I am not sure how to use the Freetext question type... It keeps asking me to set the correct answer at the bottom.. since I am taking name... there is no correct answer...

thanks in advance...

Hello,

"Freetext" question type is not suitable for this purpose. Described functionality is provided by "ARI Quiz" extension (it can show fields where a user can enter name and email before a quiz and use values of these fields in text templates). If you need this for "ARI Quiz Lite" it requires custom modification.

The component is open source and you can modify code for your needs.
