## Problem with pass/fail

Posted by felix.poindexer - 2011/03/24 19:29

---

I have a 35 question quiz, each question worth 1 point. Users need to get 27/35 (77%) to pass. The math is being done correctly in terms of the calculating the correct score for the user, however, some users have "passed" with as low as 17/35 (48%) correct.

Other than the handful of users who have been told they passed when they did not, the quiz seems to work OK. The quiz is a combination of yes/no, true/false, choose one, and choose multiple. There doesn't seem to be anything wrong with the questions themselves that I can see.

Where do I need to look to find out why the component is "passing" failed quizzes?

=====

Hello,

Could you provide temporary access to your Joomla! backend or database dump by email that we can investigate the problem?

---

"Passed score" is measured in percent. Set it to 33 instead of 5.

Thank you very much for such your quick respons.  
should I set presents instead scores(points) in all the quizzes?

---

"Passed score" parameter in quiz settings is always measured in percent.
