Javascript error after joomla upate (1.6.2)

Posted by m_e - 2011/04/20 09:10

After a joomla update I get an error while trying to add a new question.

Javascript error:

Joomla is not defined
  onclick(event=click clientX=1673, clientY=133)
index.php?option=com_ariquizlite&task=question_list&quizId=10/event/seq/1 (line 3)
    event = click clientX=1673, clientY=133
Joomla.submitbutton("question_add");

Joomla version:
Joomla! 1.6.2 Stable 14-Apr-2011 23:00 GMT

This is the button that triggers the error:

Hello,

Do you use the latest version of "ARI Quiz Lite" (v. 1.1.3)?

Regards,
ARI Soft

Sorry my bad... didn't know that there was a new version... now everything works.

Thanks!
