
Language xml NOT updating result labels.

Posted by Jay82 - 2011/05/04 16:35

Hello,

I have attached an image with the issue I am facing with the component. I am currently using 1.1.1 lite version.

I have successfully updated the labels i have highlighted in blue via the XML lang file.

However, even though I have completely updated the XML file to Spanish there are no changes in the labels in orange as you can see below on the image capture.

Is there a way to update the necessary php files to change the labels? Or can I update those labels through the database?

Please help me out, I urgently need to fix this issue.

Will provide my Joomla's admin info if necessary.

Thank You.

Hello,

Open "Text templates" page on component backend and edit appropriate text template.

Regards,
ARI Soft

I sincerely had no idea it was that simple. Thank you so much!

Great component by the way! Yours has been the best I've tried.
