## two missing \"en.php\" files

Posted by markjansen.nl - 2011/05/28 15:51

---

I've just downloaded and installed Ari Quiz. In my first attempt to use the software, I directly got errors concerning the missing file /cache/files/lbackend/en.php. As a result, I just got a white screen with the error (so no Joomla interface anymore).

So, I created a blank en.php in /cache/files/lbackend/ and chmod this file to 777. As a result, I could use the software.

However, on top of each page within the software, I get to see this error:

Warning: fopen(/home/j8108jub/public\_html/administrator/components/com\_arquizlite/i18n/cache/lbackend/en.php) : failed to open stream: Permission denied in /home/j8108jub/public\_html/administrator/components/com\_arquizlite/kernel/I18N/class.I18N.php on line 533

Warning: fwrite(): supplied argument is not a valid stream resource in /home/j8108jub/public\_html/administrator/components/com\_arquizlite/kernel/I18N/class.I18N.php on line 537

Warning: fclose(): supplied argument is not a valid stream resource in /home/j8108jub/public\_html/administrator/components/com\_arquizlite/kernel/I18N/class.I18N.php on line 538

In short: another en.php file is missing.

If I create a blank en.php in this folder, navigating within the Quiz software becomes a problem.

What to do?

Thanks.

Ps. I'm using a Dutch version of Joomla. Might this be a relevant fact?

Hello,

Check that /administrator/components/com\_arquizlite/i18n/cache folder and all sub-folders have writable permissions and /administrator/components/com\_arquizlite/cache folder and all sub-folders have writable permissions.

Thanks, that helps.

But why doesn't the installer do this?

The installer try to set appropriate folder permissions. You can see "setPermissions" method in install.arquizlite.php file.
