
Subcategories

Posted by robyki - 2011/11/18 15:01

I am evaluating your AriQuiz light and I am wondering if it's possible to create for each quiz list name, many subcategories.

The component seems to allow to set even endless quiz categories but just only under 1 main category.

For example in "Quiz List" I have Name=x Category=y.

I would like to have under the Name=x, other 10 quiz categories per each name.

Something like Category VEHICLE - Quiz Name:CARS - Subcategory Quiz1 Name=FERRARI - Subcategory Quiz 2 Name=PORSCHE - Subcategory Quiz3 Name=LAMBORGHINI etc... Then Quiz Name:MOTORBIKES Subcategory Quiz1 Name=HONDA - Subcategory Quiz 2 Name=DUCATI - Subcategory Quiz3 Name=SUZUKY etc...

Basically what I need is to have a step more for creating another category.

I hope I explained it clearly

Hello,

Sorry, but the extension doesn't support this ability.

Regards,
ARI Soft

It would be too hard to implement this function?

Finally it's just about adding categories inside another.....

What I have noticed is that the component is very good and has great potentialities, on the other hand it is not flexible at all with an objective lack of many logical and intuitive functions.

Maybe it's not the best choice for someone like me who needs a component for professional use.

I wouldn't mind if it was for free....

"ARI Quiz Lite" provides base functionality for creating quizzes. It is open source and it can be modified for your needs. We also offer "ARI Quiz" extension, it provides a lot of additional features, but unfortunately currently it doesn't provide ability to create sub-categories. We will add this ability into a future version of "ARI Quiz".

Regards,
ARI Soft

Thanks for your quick response.

I know that the full version implements many other functions but still none I am looking for.

If I am still writing in this forum it's just cause I believe in your project!
