## Warning: mysql\_query()...Unable to save result set

Posted by gierre02 - 2012/12/02 23:55

---

My local installation is OK, but when I transfer the installation to my on line server I receive the warning detailed below. It is an occasional warning, not always and not always before the same question. However the quiz seems to continue correctly and the statistics are right.

Of course if I set in the configuration.php "public \$error\_reporting = 'E\_ALL & ~E\_NOTICE & ~E\_STRICT';" the message disappears.

My configuration is Windows and Joomla 2.5.

What could be different in the server from my local installation? Is there something that I have to define on the server configuration to solve the warning or to display the error (page 404 is not displayed in Windows) ?  
can I ignore the message?

Message received:

Warning: mysql\_query() : Unable to save result set in D:\inetpub\webs\spinoff-siproit\libraries\joomla\database\database\mysql.php on line 534

Hello,

Nobody has reported about similar issue. It can be a problem with server configuration. We can investigate the problem if you provide a temporary access to your J! backend by email and provide steps how to reproduce the problem.
