
DELETE functions

Posted by anna.zarnecka - 2013/03/04 11:43

Hi,

I have experienced issue after ARI Quiz Lite entities removing. There are buttons in the tool backend allowing to remove quizzes, questions, questions categories and so on. This is especially usefull during quizzes strucure setup.

Unfortunately, after I requested to "DELETE" quiz or question - these objects ARE NOT REMOVED FROM DATABASE. Result is that after object is removd, I cannot add new one of the same name as deleted object - getting "non unique" warning.

This could be resonable if objects that I want to delete remain connected to somebody's quiz results. But even then warning would be enough.

Also, "Delete" button is not present at all for quizzes results. This would be usefull for limited number quizzes - when decision is to give another chance for some student. Without deleteting it from database tables - no way to grant access to the quiz again.

Plese help.

Regards, Anna

Hello,

We can delete a quiz and then create a new quiz with the same name without problem. Could you provide a temporary access to your J! backend by email and specify what quiz can't be created?

Read here how to delete quizzes results.

PS: "ARI Quiz" supports ability to delete specific or all quizzes results.

Regards,
ARI Soft
