Compatibility with Artof Editor
Posted by angelsguitar - 2013/03/06 10:21

_____

I'm using Artof (based on CKEditor) as the default text editor on my site. It seems that AriQuiz Lite doesn't recognize it. Everytime I finish typing a question and try to save it, it displays "Question is required" and doesn't allow me to save.

If I change the default editor to TimyMCE it works, but I would prefer to tick with Artof. Is there a fix for this?

Thanks in advance.

Hello,

"ARI Quiz Lite" is 100% working with default Joomla! editors.

PS: "ARI Quiz" is compatible with "Artof" editor and it also possible to choose what editor should be used by "ARI Quiz" extension.

Regards,
ARI Soft

_____

Thanks for the information about compatibility, but the fact is I'm still facing the same problem.

Maybe I didn't explain myself very well. Let's try again:

When I try to write a question using Artof as default editor, I get a popup message that says "Question is required" after clicking on the Save or Apply button, leaving me unable to save the question. This doesn't happen with TinyMCE (one of Joomla's default editors).

I tried the solution stated in this post, since Artof is also based on CKEditor, but it didn't work.

Is there something else I can try, that doesn't require me to swith the default editor before working on ARI Quiz Lite? I would like to use Artof for ARI Quiz Lite, as it is the default editor on my site. It's a little inconvenient having to swith the default editor just to type some questions on ARI Quiz Lite, then switch back to Artof for everything else.

_____

Read our previous post please. The extension works fine with editors which are included in Joomla! installation by default (Artof is a 3rd party editor).

If you want to use 3rd party editors, you can be interested in "ARI Quiz" extension. It supports Artof editor and other editors.

Regards,
ARI Soft

Oh, sorry, it was me who did not understand :lol:

Thanks for the information. I'm not ready to upgrade to ARI Quiz yet, but glad to know that it works with third party editors.
