Virtual Keyboard for free text question [Solved]

Posted by 191simone - 2013/09/04 11:38

_____

Hello,
I need to insert a Virtual Keyboard at the frontend of ARI Quiz, on the page of the Question, for the free text field:

I found a JavaScript Graphical / Virtual Keyboard Interface...
Take a look at this page: http://www.greywyvern.com/code/javascript/keyboard

Is it possible to use with ARI Quiz Lite?
Could someone help me to configure it?

ARI Quiz Lite ver.1.2.3
Joomla! 2.5.9 Stable

_____

Hello,

Load the script in site template and add "keyboardInput" CSS class for element. It will look like:

_____

Thank you for reply.

I use ja_t3_blank template.

So I have to modify the index.html file of this tamplate, Right?
I found it in:
www.my-site/templates/ja_t3_blank/index.html
...and I have modify it as follow:

Nothing happens!
What's wrong?

...and about this 3 files:
- keyboard.js
- keyboard.css
- keyboard.png

Where I have to upload them? In which dir of my site?

_____

At least see index.php file of site template. index.html is a blank HTML file.

Regards,
ARI Soft

_____

Thanks for your help, but I'm not able to make it work with this few suggestions.
I tried to modify the index.php file, but without success.
Unfortunately I am not a programmer.

if it worked, it would be good for all of them who want to create quizzes for the language classes... It would be a good
tool to Ari Quiz!

So I hope that someone will succeed to do it and will explain here how to do.

_____

We can help to configure it if you provide a temporary access to your Joomla! backend by email.

Regards,
ARI Soft

_____

it work very fine!!! :laugh: :laugh: :laugh: :laugh: :laugh: :laugh:

So I found your changes... I post here for anyone need it.
Check if it's all right..

Find this file:
site-name/components/com_ariquizlite/frontend_pages/question.php

..and find this code:
class questionAriPage extends AriUserQuizPageBase
{
    function execute()
      {
            $this->_loadQuestion();

and modify as follow (add text):
class questionAriPage extends AriUserQuizPageBase
{
 function execute()
 {
  $doc = JFactory::getDocument();

  $keyboardUri = JURI::root(true) . '/components/com_ariquizlite/assets/keyboard/';

  $doc->addStyleSheet($keyboardUri . 'keyboard.css');
  $doc->addScript($keyboardUri . 'keyboard.js');

  $this->_loadQuestion();

Upload these 3 files here:
site-name/components/com_ariquizlite/assets/keyboard/
keyboard.js
keyboard.css
keyboard.png

Now in order to enable the keyboard on the text area of the free-text-question, modify this file:
site-name/components/com_ariquizlite/view/questions/freetextquestion.html.php

original:

  aris.validators.validatorManager.addValidator(new aris.validators.requiredValidator('tbxAnswer',   {errorMessage : ''}));

modify as follow:

  aris.validators.validatorManager.addValidator(new aris.validators.requiredValidator('tbxAnswer',   {errorMessage : ''}));

I think that's all.

Thank you so much!
Great support!
