
external plugin code into Ari quiz

Posted by brugal - 2013/09/17 09:41

Hi,

When using the content editor in Ari quiz lite, I try to insert a tag from a plugin. Within a 'normal' article this works, but not within Ari quiz editor content.

Can you help me?

PD: i've posted here because i couldn't access to ari quiz lite forum

Hello,

Joomla! executes content plugins in articles only, it doesn't execute them in other content like modules, components and etc.

PS: "ARI Quiz" supports ability to use content plugins in question text.

I don't know if i misunderstood your PS, but if i introduce external plugin code in question text doesn't work either. Is it because i'm using "Ari Quiz lite" instead of "Ari quiz"?

It works for "ARI Quiz", not for "ARI Quiz Lite".
