## allow mosdewplayer plugin in questions fields

Posted by caloche - 2010/05/30 14:28

Hi all,

great extension, thx!

I'd like to use it on a langage educationnal website. To put audios on my standard joomla articles, I use the syntax {play}xxx.mp3{/play} to call the dewplayer plugin : <http://www.cours-arabe.fr/je-suis-tu-es>

It would be great if I could do the same in my questions & answers field inside your component. I presume it could be possible to do the same for any multimedia source, as DM or Youtube videos for example?

Any help would be appreciated :)

Hello,

You can insert HTML code into question and answer text. If you want to use content plugins in questions and answers, you can be interested in ARI Quiz component which supports this possibility.

Regards,  
ARI Soft
