
copy data from one database table to another

Posted by amitrns04 - 2013/12/24 16:19

sir I want some help, I have your extension ARI Quiz lite and using joomla version 2.5.16.

I have some data as question answer in a different database table. I want to copy them in my new database table. how to do this.

I dont need to copy the entire database or website, I just need to copy question and answers only

Hello,

If you want to copy all quizzes data to a new database, copy all database tables with "#__ari" prefix.

Regards,
ARI Soft

thank you sir, I got it

what should I do for existing rows? should I remove them before copy?

or I should delete the existing tables and then copy the tables as "structure and data" from another database I have.

It is possible to copy all data from one database to another. It is not possible to merge data.
