What is creating 3.css?
Posted by andrew222 - 2014/07/10 04:32

_____

Hi,

I'm trying out the lite version of the quiz to see if it's suitable for a clients website although they do want a different layout for the questions. They will go for the full version if it works well.

After making adjustments to default.css and question.html.php I've managed to change the layout but have come across a file titled 3.css that keeps over riding certain things, in specific .ariQuizQuestionTitle

I can download this css file and change it no problem and the desired effect works but it's located in the cache folder so is it not a temporary file?

Here's the full url of the file

administrator/components/com_ariquizlite/cache/files/css//3.css

There is also an .ariQuizQuestionTitle entry in default.css which I was initially editing but 3.css over rides it. I can also delete 3.css but it just comes back.

Any help is appreciated.

Thanks,

Andrew

_____

Hello,

These CSS files are cached copy of CSS files which are created on "ARI Quiz Lite -> Templates" page on component backend.

Regards,
ARI Soft

Thanks for the reply. I get it now ;)

Ignore the 3.css file and make any changes directly into the template file via the components page.

I've never seen it work that way before as normally I just edit css files within Dreamweaver as it's faster and then send them up.

Cheers.
