## ARI QUIZ lite - Show top 5 scorer

Posted by vikram0811 - 2015/03/09 05:08

---

Hello,

We have installed ARI Quiz lite and works good for us. After the quiz is completed, how can we show top 5 scorer based on highest number of points scored and minimum amount of time taken.

Also is it possible to add filter for Score while viewing Quiz Results in admin section ?

Thanks.

Hello,

"ARI Quiz Lite" contains "ARI Quiz Top Results" module which can show best results, but it shows results for all quizzes.

If you want to add a filter to quizzes results page, it requires modification of the extension.

How can I fetch top 3 scorers based on different quiz. I have created two quizzes and both of them have attempt count set to 1. Now my first quiz is disabled and second one is enabled for the users. But still user can't see Continue button for quiz 2.

Does the attempt count works on individual quizzes ?

---

"Attempt count" is defined in quiz settings and each quiz uses own parameter from quiz settings. It is not affected on other quizzes. The parameter is used only for registered users.

---

"ARI Quiz top results" module shows best N results. The results are sorted in descending order by number of earned points in percent. The module is installed by default with the component.

For Top Results, Result measure unit is set to Points. But on the result list it shows user with lowest score point. In DB if I sort user on the basis of ORDER BY `tbl\_ariquizstatisticsinfo`.`UserScore` DESC it shows different result.

---

The module sorts data by number of score in percent (  $\text{UserScore}/\text{MaxScore}$  ). "Measure unit" parameter is used to specify what data will be shown (absolute score or percent), it doesn't affect on sorting.

Our quiz has 10 questions, each having 20 points with 20 secs of time. I need to list down top 5 scorer based on highest points scored. If two users have same score then they will be sorted with highest score and minimum time taken.

How can I achieve this ?

---

We described before how the module sorts data. If you want to change this, it requires modification of the extension. See "getTopResults" method in /administrator/components/com\_ariquizlite/kernel/Controllers/class.ResultController.php file.

Yes I know the controller to modify. How can we modify that query getTopResults() to achieve the desired result ?

---

If want to sort by earned score instead of percent score, use ORDER BY QSI.UserScore DESC instead of ORDER BY MAX(QSI.UserScore / QSI.MaxScore) DESC

I just changed QSI.UserScore to UserName

```
' GROUP BY QSI.UserScore' .  
' ORDER BY QSI.UserScore DESC'
```

-----

```
' GROUP BY UserName' .  
' ORDER BY QSI.UserScore DESC'
```

It works, but only when the user is allowed to take the test once. If the user takes the test again, it will delete the result from his first try.
