## Delete cache

Posted by adolcini - 2015/09/03 19:32

---

Hi I backuped and restered the website with Akeeba.

It seems that works well but when I arrived at the end of the test it doesn't found the final page with the succseful template or faild tempalte.

It seems that the system has hached the url... is it possible to delete the cache ?

I also tried to disinstall and re-install the component but the problem persist.

Any ideas ?

Thanks  
ANdrea

Hello,

The extension doesn't cache any urls. It can be a problem with a 3rd party extension.
