Display answers to test takers
Posted by ktsugihara - 2010/08/17 13:07

In the Administrative area, when you go to Results, and click Details, you are given an outline of every question and what they got wrong.

Is there a way to present this to the test taker? I have a site where I post quiz's for my paramedic class and I want to use it as a study guide, but thats tough when you do not get the real answers.

Hello,

ARI Quiz Lite doesn't provide this ability, but you can be interested in ARI Quiz. It can display questions with answers at the end of a quiz.

So I've gotten closer...

The results page inside of the admin interface links to this:

It looks like editing the doTask method inside of the class.TaskManager.php in administrator\components\com_ariquizlite\kernel\Web\ did the trick.

Incase anyone is interested.

Hello,

You can create necessary pages for frontend based on /administrator/components/com_ariquizlite/pages/result.php and /administrator/components/com_ariquizlite/pages/results.php files.
