## Two problems: quiz memory and \"results site\"

Posted by Grzech - 2010/12/30 20:35

---

Hello

I have installed Ari Quiz Lite, made quiz, and i thought that everything was alright till I try to solve quiz once again. When I opened a quiz I saw a results site again instead of first question. I tried to solve quiz on another PC but there I saw my results site again. So how can I configure ARI Quiz Lite to don't keep a memory of earliest solved quiz? I even try on Yours demo page and when I've done few questions, then returned to main page and next to open demo test again I saw a question on which I've finished last time (instead of first question).

All this things I've tried without logging on site.

Second problem: How to translate "results site" on my language? Rest pages I have on polish language, but only this site is in english, and I see this text on the top: "Dear Quest, you have zaliczony quiz "Czy znasz Biblie" - it's a mix of english and polish words...

Regards

=====

Hello,

The component saves all results into database. It doesn't provide ability to switch off this feature. Text of quiz finish page can be changed in "Text Templates" section on the component backend.

Regards,  
ARI Soft
