
ARI Sexy Lightbox support Video now?

Posted by mistan - 2011/03/10 18:39

Looks like ARI Sexy Lightbox supports video and external page now? like shadowbox? please confirm. I need sth like this. Thank you,

Tony

"ARI Sexy Lightbox" can show remote pages, inline content, images, YouTube and Vimeo videos, Flash objects and QuickTime movies. See demo here.

For remote video display, is it possible to show a video frame instead of a text link? just like using youtube embedding code? or I have to generate my image for that purpose? Thanks as usual for everything.

Tony

Re:ARI Sexy Lightbox support Video now?

Posted by savager - 2011/06/22 10:54

I have just purchased ARI sexy lightbox.

I have quicktime movies for my portfolio that I want to display on my site in a lightbox. Currently I am working on my localhost.

I have installed the plugins, modules and the 1.6 extension and enabled everything. Is there documentation or a tutorial on how to use ari sexy lightbox to put movies up. I cannot find anything on the web.

I have used this code to try insert a video on an article
{arisexylightbox activeType="rcontent" width="792" height="294" url="images/video/runningfbx_normal.mov" title="Video"}}{/arisexylightbox}

but all that gets displayed on the page is this link:

If I then click on the link it plays the video in a new page in the standard quicktime player.

Any help would be most appreciated!

Also - am I able to show a simple gallery of videos that open up in a lightbox?

Thanks so much!

Hello,

Provided code looks correctly. If it doesn't work, this can be a conflict with a 3rd party extension or site template. If you can't provide link to page where we can see the problem, send page file of the page where the problem occurs by email. This process is described here. Documentation can be found in "Description" field on module or plugins settings page:

http://www.ari-soft.com/images/fbfiles/images/lightbox_documentation-1343d7b742d4704ceba4f1df4718bb90.jpg

"Simple gallery" layout type is acceptable for image galleries only.

Hi thanks for the quick response.

I can get the lightbox to work if I use the plugin and place it on a specific page - but then the video doesn't play - it comes up in a lightbox with the first frame of the video frozen there.

If I try placing inline content i.e. a quicktime video it shows the text link, but when clicked it opens video in quicktime player.

I have attached the page to this message.

Thanks for your help! <http://www.ari-soft.com/images/fbfiles/files/page.zip>

Save all page files (including javascript, image and CSS), not only HTML file, archive them and send archive by email please.

Open "System - ARI Sexy Lightbox Anywhere" and "System - ARI Sexy Lightbox" (if it is installed and enabled), check that "Include jQuery" parameter is set to "Yes" and re-save plugin settings in any case.

Ok, I've figured out that jquery needed to be set to 'local copy' - now the video loads in the lightbox, but it doesn't play - it shows just a freeze frame.

ugh.

Hope you can sort this out for me.

Thanks!
