## All-or-nothing items in J!1.6.3

Posted by corymc - 2011/05/02 20:26

---

Since upgrading to J! 1.6.3, my ARI Slider stopped working correctly. In the "simple" item selection mode, I get nothing at all; in "advanced" mode I get every article on my website with no pics on the menu bar, no matter how I try to limit the selection to categories and assign pics. I have tried a fresh ARI Slider install several times, but the problem persists.

Any thoughts?

Thanks.
