Images not displaying within slider wrapper

Posted by 21stcn - 2011/05/17 12:20

Hi.

I'm a big fan of Nivoslider and like the look of your extension. But can't get to work. As you can see from the attached image, the images aren't being confined and cropped within the frame. When the image changes, they also layer on top of each other. During loading, you see the frame and the little navigation circles at the bottom, but the images overflow.

Unfortunately I am developing on localhost so can't link to it. I haven't any other js scripts running on the page. Any idea what is causing this issue? (It is the same in FF and IE).

Thanks so much. http://www.ari-soft.com/images/fbfiles/images/Image1.png

Hello,

We suppose the problem occurs because you use images with different sizes.

Ok. I for some reason assumed that it had an integrated crop/resize function. I guess I will resize the images, or just get another slider.

Thanks anyway

The module can create thumbnails for images. See "Use thumbnails", "Thumbnail width" and "Thumbnail height" parameters in module settings.
