Nothing appears with {$fulltext}, {$introtext}...

Posted by Antonin - 2011/06/29 09:34

Hi,

I installed ARI Slider properly, with the ARI plugin first and then the module. The module appears on my pages and the configuration seems to work (my articles are recognized in the "Slider Item#" menu), but the module keeps being empty. Nothing appears, nether the fulltext, the title, etc... These articles are recognized by others slideshow modules. And the text isn't in the source code (not a problem of opacity like another thread). I think I've followed every instruction that was told, I run under Joomla 1.6.3 stable (no mootools).

This module seems great and exactly what I need, can you please help me?

Antonin

EDIT : the {$created} tag is working, interesting !

EDIT BIS : Okay I had it working with {$introtext} instead of $fulltext. Thanks anyway !

Hello,

It seems articles which are loaded into the slider contains only intro text. {$fulltext} contains value if an article splits into two parts: intro text and main text.

Regards,
ARI Soft

I have another question, which isn't related to the first one, but I prefer post here than create another thread : is there a way to put text in the navigation bar instead of images?

Thanks for your quick response.

No, the module supports only image navigation.

Okay so i'm gonna use images with text but is there any way to change the width of each images of the navigation bar? So I can put images with a bigger width to put text in it?

It is impossible, but you can use article titles as tooltip for navigation icons.

Here I come again ! Thanks for your answers, this still is a good module.

I have a problem with using the content plugin for the Slider. I installed the plugin and activated it, but when I type (exactly) :

{arislider moduleId="46"}

In an article, the module doesn't appear. I tried in html code or with the "Non WYSIWYG Editor" but it still doesn't work. Any ideas?

Hello,

Is module with ID equal to 46 enabled? Could you provide link to page where we can see the problem and temporary access to your J! backend by email that we can investigate the problem?

Regards,
ARI Soft

Hey ! It works when the module is enabled ! Sorry for wasting your time I didn't think it needed to be enabled. Thanks a lot again.
