ARI Slider positioned above menu dropdowns[Solved]

Posted by RareAir - 2011/10/16 14:05

I am working on this website: and I am having an issue with the ARI slider.

When the animation changes between the pictures, the new picture will hide any dropdown menu's that have been generated.

How do i position the ARI Slider under the submenu dropdowns?

Hello,

It seems drop-down menu doesn't work on provided page. It generates a javascript error.

Regards,
ARI Soft

Add the next CSS rule:

```
#ais_130_wrapper
{
 position: relative;
 z-index: 1;
}
```
