## W3C Validation

Posted by dimna - 2011/12/17 11:01

---

Hello,

I am again.

I tried to validate my testpage

dimna.de/Joomla17\_ ,

but

MyJomla/modules/mod\_arieasyslider/includes/js/themes/base.css

didn't validate.

Do I make a mistake?

Regards

Hello,

The extension uses some specific CSS rule (with prefix "-moz", "-webkit", "-o" and etc., these are browser specific CSS properties which are not defined in CSS specification) to provide cross-browser compatibility.

Regards,

ARI Soft
