[SOLVED] Image Slider Positioning Problem

Posted by Giankomat - 2011/12/30 17:37

HI all!!!

Great plug, it works great.. :cheer: but I've a little problem... :(I need lower the slide box position about 100 or 200 px in the red zone of the home page because in the actual position the users cannot watch and use the menu. I think that I should edit the source language :unsure: Please can you help me? The adress of my site is this: www.eunat.net (it is a site for nudists) :) Thank you for all... (excuse for my mistakes...) HAPPY NEW YEAR!!!

Hello,

Try to use the next CSS rule:

```
#nav .ari-image-slider-wrapper
{
 padding-top: 52px
}
```

Regards,
ARI Soft

Set "Width" parameter in module settings to correct value. In your case it is 750 value.

Regards,
ARI Soft
