
Joomla menus are going behind Slider

Posted by jeffrozar@yahoo.com - 2012/01/22 01:15

Looks like a great product, will want to be using it, but right now the images in the ARI Slider are in front of my dropdown menus on my homepage.

How can I change the z-index of the ARI Slider control?

Hello,

Could you provide a link to a page where we can see a problem?

Regards,
ARI Soft

I can't use ARI Slider, actually. It crashed Chrome and IE and showed a message about the script running too many times.

I temporarily fixed it by setting z-index to 2000 in header and 1 in content in layout.css in yooTheme's Phoenix template.

"ARI Slider" works fine in Chrome and IE browsers, you can see it on our demo page.

If it doesn't work on your site, it can be a conflict with a 3rd party extension. If you provide a link to a page where we can see a problem, we will investigate it.
