## mouseover makes image disappear

Posted by williwaw - 2012/02/06 07:29

---

When I put an .ini-file in my images/ariimageslider/folder, it does what it is supposed to do, it puts a description and I can enter a link. However, when I put my mouse over an image, that image and description disappear. The link does work. I use a standard template, beez5. Can I "fix" this, in order to keep the image visible on mouseover? Here is a link to my site. I use the module on the top right-hand side on my homepage.

Compliments on your extension!

Hello,

Provide a link to a page where we can see described problem.

Regards,

You are very fast.... I just edited my post in order to provide a link.

Here is a link to my site. I use the module on the top right-hand side on my homepage.

Sorry for bothering you, it was a template-problem. I deleted the background-color in my beez5.css on line 40, and my problem is solved. I will rate your extension in the Joomla! Extensions Directory for I'm very pleased with it.

Topic can be closed... :silly:

Yes, this problem with site template styles. It uses global CSS rules for a:hover elements. It can be fixed if add the next CSS rule:

```
A.nivo-imageLink:hover
{
    background-color: transparent;
}
```
