## I need more of 10 items of current version ...

Posted by falknet - 2010/03/09 14:17

---

Hello , I need more of only 10 items allowed by the current version of ARI Silder inside the module interface.

I need about 15/20 items for a producuts slide that yon can see at te following URL (my testing server) :  
[http://www.stefanopola.com/holiday/index.php?option=com\\_content&view=article&id=37&Itemid=50](http://www.stefanopola.com/holiday/index.php?option=com_content&view=article&id=37&Itemid=50)

The CSS slider is customized for according to the graphic style of the overall site.

Please , can you provide to update the component itself (I think to be not the only customer I need this function) or tell me what I have to do for that?

Thanks a lot. :)

Hello,

We have increased the number of articles up to 20. You can download updated extension in 'Member Area'.

Regards,  
ARI Soft

Hello,

I have installed the latest version of the module on our test server and it contains 20 fields for articles. Check that 'ARI Slider' module v. 1.3.0 is installed on your site. You can see this information on 'Extensions->Install/Uninstall->Modules' page on your Joomla! backend. If you have version 1.3.0, provide temporary access to your Joomla! backend by email, please, that we can investigate this issue.

Hello, sorry but now I have another problem: I can load more than 10 items in the module (admin back side ,exactly 12) but the module views only the first 10 items in the site ..... what else I have to do again ,please?

I customized the style.css to according the graphics site but I do not remember that was a value for a maximum thumbnails images to view at the same time.

Thanks a lot

Hello,

Download 'ARI Slider' v. 1.3.1 from 'Member Area' on our site and update it on your site, please. It should resolve issue which you described.

Regards,  
ARI Soft

There is a problem with 1,3,1,: I view only 11 items instead of 12 loaded in the module and the order of some of that (article in association of the related thumbnails) is wrong : in addition if I click over the 6th item the slider back to the first again , please connect to my test server and verify yourself.

Tanks a lot.

The first issue occurs because "ARI Slider" below version 1.3.2 shows only unique articles and in your module you use one article twice. The second effect occurs because the system scroll menu items to the nearest page if you click on menu item part of which is placed on the current page and another part on another page. "ARI Slider" v. 1.3.2 is available. It contains small bugs fixes and provides new parameter 'Strict Navigation', set this parameter to 'Yes', if you want to avoid the second situation from your previous post. And new version shows non-unique articles in a slider. You can download v. 1.3.2 in 'Member Area' on our site.
