
Solved: ARI slider and VM2 on product details

Posted by kaz101 - 2013/01/28 01:56

Hi,

I'm setting up a website for a client.

He wants an image slider on the VM2 front page and not in the product details.

I thought that ARI slider was working that way until I realised that it was loading on some products details and not on others.

The module is set to load on the home page only.

<http://www.beerwahhealthfood.com.au/> front page

<http://www.beerwahhealthfood.com.au/heart%20&%20circulation-50f99fadf23b5/-50f9a0c0e37e2-detail> This shows details with ARI slider loaded above it.

<http://www.beerwahhealthfood.com.au/women%27s%20health-50f99f9eaf9a6/-50f9a08a5909d-detail> This shows product detail but there are only the 3 dots there and the images are not loading. I didn't notice the dots there before and was happy that the slider wasn't loading.

Any idea what I can do so that the image slider doesn't load on the product details page for VM2?

Thanks,
Karen

Don't worry about this. I changed my set up on the home page and now the slider doesn't appear on the product pages which is what I wanted.
